ENDOCRINOLOGY (ISSN 0013-7227; IPM 0059668) is the official journal of The Endocrine Society and is published monthly by The Endocrine Society, 8401 Connecticut Avenue, Suite 900, Chevy Chase, MD 20815-5817. Periodicals postage paid at Chevy Chase, MD and at additional mailing offices. Subscription rates are \$447 (\$617 international); institutions \$967 (\$1,190 international); institutions on-line only \$869 (U.S. and international); in training \$258 (\$401 international); single copy \$68 (\$76 international). Society member dues of \$266 (\$334 international) includes print and online access to one primary journal and online access to an additional two primary journals. Subscription prices subject to change. All subscriptions start with the January issue. To order call (301) 941-0210. All subscription orders for customers in Japan must be placed through our exclusive agent, USACO Corporation, 17-12, Higashi-Azabu 1-chome, Minato-ku, Tokyo 105, Japan. Telephone 03-3505-6161. Please contact USACO for 2006 yen rates. Printed in the U.S.A. POSTMASTER: Send address changes to *Endocrinology*, 8401 Connecticut Avenue, Suite 900, Chevy Chase, MD 20815-5817. Indexed by BIOSIS, Current Contents, Index Medicus, Elsevier BIOBASE/Current Awareness in Biological Sciences, National Biological Service, EMBASE/Excerpta Medica, and Sociedad Iberoamericana de Informacion Cientifica (SIIC). Printed on acid-free paper. Table of Contents and abstracts for each issue available on the issue mail date on The Endocrine Society Home Page at <http://endo.endojournals.org>. COVER: Glucocorticoids induce a rapid synthesis and release of endocannabinoids in the paraventricular nucleus of the hypothalamus (PVN), leading to the suppression of glutamatergic excitatory synaptic inputs to PVN neuroendocrine neurons, including the corticotropin releasing hormone cells that trigger the activation of the hypothalamic-pituitary-adrenal (HPA) axis in response to stress. This glucocorticoid-induced, endocannabinoid-mediated suppression of synaptic excitation is mediated by a membrane-associated glucocorticoid receptor and represents a possible central mechanism responsible for the rapid negative feedback of the HPA axis by glucocorticoids. From the article by Tasker *et al.*, in this issue, pages 5549-5556.
